Can Iowa provide equitable access to safe drinking water?

Nitrate is regulated in drinking water at 10 mg/L (as N)....
....but growing evidence suggest increased health risks at half that level

In 2017:

Community Water Systems > 5 mg/L

From March to July: 44 CWS serving ~650,000 Iowans

Private Wells > 5 mg/L

1,436 out of 6,653 (22%) of wells tested...
...but only 9% of all private wells were tested in 2017
